

NuajBridge 25G · Preliminary

The attack stops here.

Protection that rivals a \$350,000 appliance,
at line rate, both ways.

It sits in front of your router, learns what normal looks like, and stops DDoS attacks and known threats coming in, and infected devices calling out.

25 Gb/s

Each way at once, at every packet size.¹

74 Mpps

Forwarded and filtered in the network card itself.¹

1/14

The first-year price of a dedicated DDoS appliance at this speed.²

How it compares.

	Inline protection NuajBridge 25G	Firewall FortiGate 700G	DDoS appliance A10 Thunder 1060S	DDoS appliance FortiDDoS-1500F	Cloud DDoS Cloudflare Magic Transit

Three years	\$36,997	\$73,833	Quote	\$490,761	\$495,000+

¹ Expected, not yet measured on a production unit. The NVIDIA ConnectX-6 Lx network card forwards and filters the traffic itself; NVIDIA's published tests pass 74.4 million packets a second through it at the smallest size, 25 Gb/s each way, with none lost. Hardware forwarding and 164,000 filter rules proven on the previous-generation card in the Nuaj lab, October 19, 2026. Measured figures will replace these before release.

² Vendors' own ratings, not measured by Nuaj; capabilities from vendor documentation. US street prices, October 19, 2026, with the subscription each needs (FortiGate: Unified Threat Protection; FortiDDoS: FortiCare Premium). Cloudflare: smallest tier on a public contract price list (NJSBA, June 2026), bandwidth not stated. A10, NETSCOUT AED 8100 (22 Mpps) and Radware DefensePro X50 (45 Mpps) sell by quote only.
